

Westinghouse

10 SEER

Split System Air Conditioners

Engineered for Quality

- More than just better indoor comfort; we want you to feel comfortable investing in a product that will perform when you need it most. Each Westinghouse air conditioner is checked approximately 144 times during the manufacturing process then run-tested to check operation performance.
- In the final analysis, computer-automated testing is performed to capture operation data for future reference should your dealer ever need it.
- Westinghouse air conditioners are built with proven components to provide safe, clean and reliable comfort year-round.

When an air conditioner is truly built to exacting standards of quality and durability, the manufacturer's confidence shows in its warranty.

Westinghouse products carry a 5-year warranty on the compressor and a 1-year warranty on all parts.

When choosing your air conditioner, look not only at the product, but also the service and support provided by your dealer. Westinghouse dealers receive extensive training in the installation and care of your equipment. That means your Westinghouse dealer can help you select the right air conditioner for your home and keep it in top operating condition.

So for home comfort year after year, trust the Westinghouse brand.

10 SEER Split System Air Conditioners

Split System

A "split" system is the most common heating and cooling central system used. Your split system air conditioner is the outdoor component of a total system. The indoor component is a matched coil, which typically sits on top of the furnace, or in warmer climates, an indoor air handler is used. When you replace your outdoor system it is extremely important to replace the indoor portion as well, in order to meet energy efficiency performance and not void important warranties. Not changing your indoor component is like buying a new car then placing old, worn tires on it.

Features & Benefits

A full metal jacket protects the coil from damage by weather and flying debris. It is finished with a Silicone-protective polyurethane coating that under goes a 950 hour salt spray test for harsher climates. It protects your unit from corrosion 50% more than standard outdoor finishes.

These units are designed with the most reliable compressors. As a matter of fact, when it comes to compressor reliability, our split system products continue to be recognized for outlasting other manufacturers who use the same compressor. In fact, the compressor manufacturer reported we performed 35% better than the industry standard.

The one-piece top-design provides maximum air flow and quiet operation to increase your indoor comfort.

Reduce energy costs with a Programmable Thermostat. By programming the thermostat to your schedule you can reduce the operating costs.

*** Annual costs based on 36,000 Btu unit, 1500 cooling load hours, and .08/kwh. Actual costs may vary depending on climate conditions, energy rates and patterns of usage.**
